ABOUT ME

Senior AI Engineer with hands-on experience building production-grade Generative AI systems, specializing in LLMs, RAG, and agent-based workflows. Currently delivering enterprise GenAI solutions at Tata Consultancy Services for a client based in Cupertino, California (Apple), while teaching Computer Vision and NLP at Universidad Nacional de Rosario. Strong focus on reliability, prompt engineering, and real-world deployment of GenAI applications at scale.

EDUCATION

Universidad Nacional de Rosario - 2024 – Present

Bachelor's Degree in Artificial Intelligence

Universidad Nacional de Rosario - 2022 – 2024

Technical Degree in Artificial Intelligence

EXPERIENCE

Apple via Tata Consultancy Services - May 2026 – Present

Senior Generative Artificial Intelligence Engineer - (Client based in Cupertino, California)

Design and development of production-grade GenAI automations using LLMs for business and IT use cases, working with automation architects, product owners, and business stakeholders; construction of end-to-end intelligent workflows combining GenAI with automation platforms (APIs, scripts, RPA, event-driven flows); implementation of prompt engineering, structured outputs, and guardrails for reliability and safety; development of agent-based workflows (task planning, tool usage, decision-making) using LangChain, LangGraph, and MCP; building of RAG pipelines over vector databases for enterprise knowledge grounding; creation of reusable components and accelerators; optimization for performance, cost, and scalability; enforcement of security, compliance, and responsible-AI controls across production rollout and monitoring.

Wiener Lab - Jun 2023 – Apr 2026

Artificial Intelligence Developer

Design and development of AI-driven solutions using Large Language Models (LLMs) for technical support, customer service, and product knowledge automation, integrating internal documentation, technical manuals, PDFs, relational databases, and search engines; implementation of Retrieval-Augmented Generation (RAG) architectures combining vector search, metadata filtering, and business rules to improve answer accuracy and reliability; development of data pipelines for ingestion, normalization, and maintenance of medical and technical data; integration with internal APIs, enterprise systems, and authentication layers; continuous optimization through prompt engineering, embedding strategies, evaluation metrics, and user feedback in production environments.

Universidad Nacional de Rosario - Oct 2024 – Present

Instructor – Computer Vision and Natural Language Processing

Instructor in the University Technical Degree in Artificial Intelligence, teaching Computer Vision and Natural Language Processing fundamentals; design of hands-on assignments and applied projects using Python, PyTorch, OpenCV, and Hugging Face Transformers; guidance of students in model development, evaluation, and best engineering practices; collaboration with faculty members on curriculum design, assessments, and continuous improvement of academic content.

SKILLS

Programming: Python, Bash, SQL, JavaScript

ML/AI: PyTorch, TensorFlow, Hugging Face, LangChain, scikit-learn, OpenAI API, MCP

Infrastructure: Docker, FastAPI, Git, Linux, OpenTelemetry, Pandas, NumPy, Jupyter

Mathematics: Linear Algebra, Probability & Statistics, Calculus

Languages: Spanish (Native), English (Intermediate), Portuguese & German (Basic)
